

Revolutionary palletizing concept

Why choose SAVVY Palletizing Solutions

SAVVY Palletizing Solutions was founded with the mission of developing a new concept based on standardized and innovative palletizing solutions.

The foundations of the solutions adopted are based on the idea of a 99% guaranteed **efficiency**, **flexibility** in terms of the formats and dimensions of boxes, providing the user with all the **autonomy** to manage the equipment, and savings in the investment achieved through mass production and the reduction of assembly costs based on the **plug & play** concept.

SPS also differs significantly from other existing equipment on the market as it has a network of partners, SPS Premium Partners, which provides **assistance to users in 4 of the 7 continents**, thereby offering a service that works closely with the customer.

These standardized solutions are divided into three products depending on the speed required: DUOBOT, SAVVY PAL, and SAVVY PAL XL.

We collaborate in our clients' development, providing tested solutions that increase their efficiency and maximize their investment.

SPS is a line developed by IPLA, a company with more than 30 years of experience in the development of box palletizing projects with more than 1,500 palletizers installed over 6 continents.

In 2018, after 25 years of developing robotic solutions tailored to the requirements of each customer, there arose a need to develop standardized equipment that offers our customers the versatility to adapt to the constant changes required by the market.

What makes
SAVVY
Palletizing
Solutions
different?

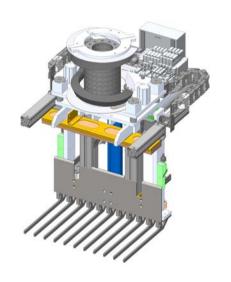

©2 FLEXIBILITY

O3 PLUG&PLAY

AUTONOMY

EFFICIENCY

Savvy Palletizing Solutions robots offer a palletizing speed from 8 to 35 cases/min. In addition, they exclusively use fork-type grippers, which provide a guaranteed 99% OEE. Thanks to their unique features, these grippers are the best option for a palletizing robot.

Optimal palletizing quality:

Thanks to their built-in reference blade, our grippers ensure perfect palletizing for each box.

Better efficiency:

Our palletizers don't require mechanical adjustments to change the format of the boxes, so they ensure maximum efficiency.

Greater safety:

There is no chance of boxes breaking during palletizing. Even if the adhesive tape on the B1 cases is poorly applied, cases will not open by themselves during the palletizing process.

99% OEE GUARANTEED

FLEXIBILITY

ANY TYPE AND SIZE OF PACKAGING from 120x120x90mm to 600x400x400mm

One of our customers' biggest problems is the constant variation in case sizes and formats. With SPS palletizers, we solve this problem by being able to work with any type and size of box from 120x120x90mm to 600x400x400mm.

PLUG&PLAY

Our palletizing cells are mounted on a metal platform, which implies an 80% savings on the assembly time compared to a conventional robot.

80% time saved in assembly and relocation

AUTONOMY

Our palletizers incorporate an integrated pattern generator software. This easy and intuitive software allows you to create a new palletizing pattern in less than two minutes. You can save patterns and switch between them at any time.

pattern generator

O1 DUOBOT

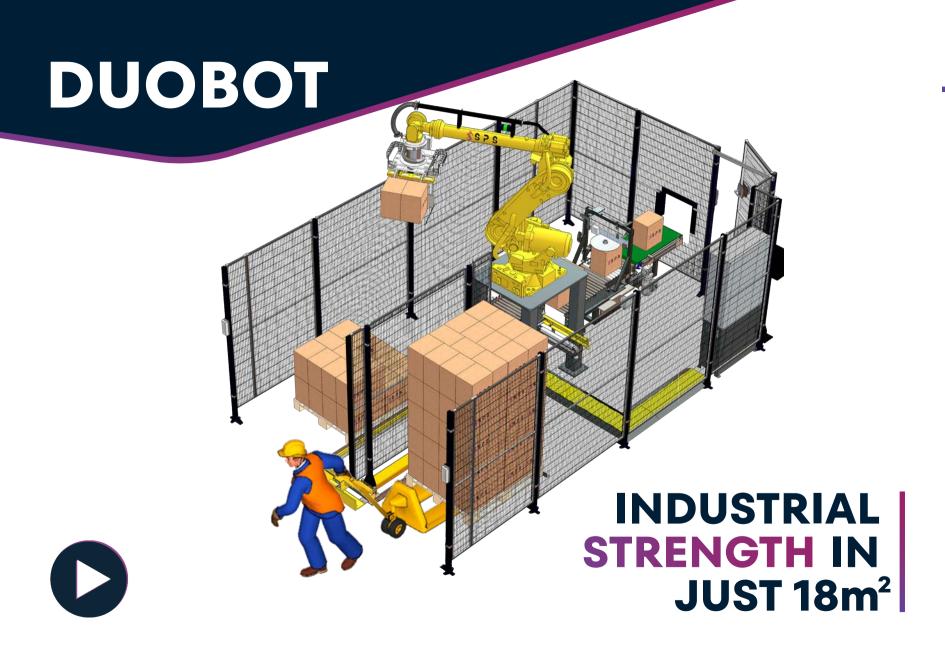

The new DUOBOT palletizing cell was developed to offer an industrial alternative to collaborative robots. The robot has two palletizing positions that work alternatively. This allows for the operator to access it in order to remove the entire pallet while the robot continues working on the other side.

SAVVY PAL

SAVVY PAL is a unique concept in palletizing. It is mounted on a platform, reducing installation and commissioning time to 3 days. The design is based on versatility, as it can easily work with any type of box between 120x120mm to 600x400mm.

SAVVY PAL XL

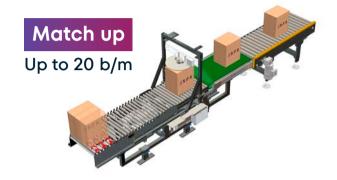

The SAVVY PAL XL is the biggest and fastest solution of the SAVVY Palletizing Solutions family. The gripper is designed to pick up the boxes in rows, allowing it to work with any size and any type of box with rows up to 1200x400mm.

CONFIGURATION

> MODELS

OPTIONAL

▼ **INDUSTRIAL ROUTER**

Allows for remote access to the palletizing cell via a WiFi network.

▼ FACING *Only in Match Up configuration

Allows for the final orientation of the boxes to be modified in order to make the label visible or not.

→ SHEET DISPENSER

Includes the slip sheet deposit and the vacuum device for the gripper.

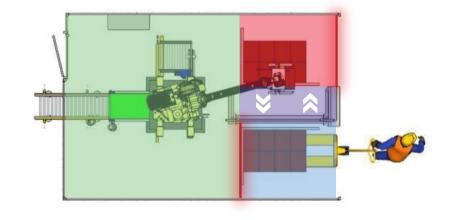

HOW DOES IT WORK?

When the robot is palletizing in the red zone (movement of the boxes indicated by the green arrow), the safety fence moves sidewards (movement indicated by the white arrows), providing more space from the purple zone to the red zone.

In these circumstances, the operator can access the blue zone without stopping the robot to remove the full pallet and replace it with an empty one.

Once the pallet is complete, and as long as the blue area is free, the safety fence moves sidewards, providing space from the purple area to the blue area, so the robot can continue palletizing in the blue area. Any access to the green zone immediately stops the robot.

CHARACTERISTICS

GENERAL CHARACTERISTICS	DUOBOT V2	
	Regular	Match Up
Required clearance height*	4200mm	
Box entry height	Between 600mm and 900mm	
Pallet exit height	-	
Maximum pallet height	2400mm	
Minimum ambient temperature	5 °C	
Planimetry	± 2	5mm
	5mm on pall	etizing positions

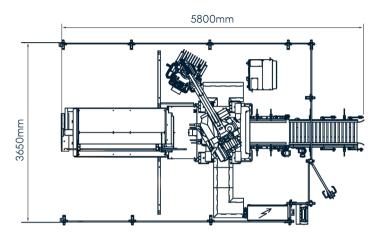

ELECTRICAL CHARACTERISTICS			
Electrical installation (1)		400V 3Ph+N+GND 50Hz	
Installed power		13 KVA	14 KVA
Air pressure		6	bar
Air consumption	Without sheet dispenser	85 NI/min	99 NI/min
consumption	With sheet dispenser	108 NI/min	135 NI/min

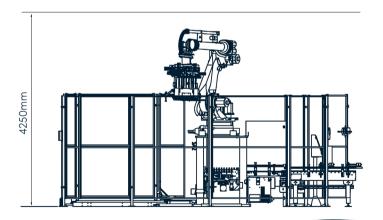

ROBOT		
Model		FANUC R-2000iC/125L
Maximum	Without sheet dispenser	43 kg
load	With sheet dispenser	38 kg
Controlled ax	es	6

SHEET DISPENSER	
Accepted sheets	Corrugated cardboard Anti-slip paper

PALLETS	
Supported types	All
Supported dimensions	1000 × 1200 / 800 × 1200

TECHNICAL LAYOUT

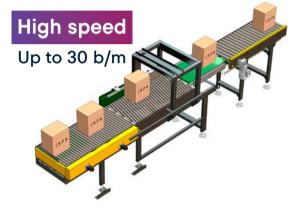

CONFIGURATION

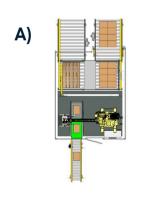

> MODELS

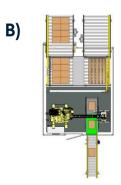

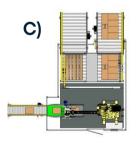

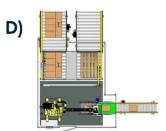

> LAYOUT

OPTIONAL

→ PALLET DISPENSER

Allows for feeding in stacks of pallets instead of doing it one at a time.
Also includes the safety elements.

→ SHEET DISPENSER

Includes the slip sheet deposit and the vacuum device for the gripper.

PALLETJACK CONVEYORS

Pallet conveyors designed to work with palletjack conveyors.

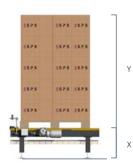

Distance from floor: 100mm

CUSTOM STAND HEIGHT

*Required if x+y > 2400mm

For loads over 2400 mm, by adding the height of the highest pallet to the height of the pallet conveyor.

→ INDUSTRIAL ROUTER

Allows for remote access to the palletizing cell via a WiFi network.

Y FACING

Allows for the final orientation of the boxes to be modified in order to make the label visible or not.

CHARACTERISTICS

GENERAL CHARACTERISTICS	SAVVY PAL V4			
	Regular	N	Natch Up	High Speed
Required clearance height*	:	Standar	d stand: 4200m	nm
Required clearance height		Custom	stand: 4600m	m
Box entry height	Between 700mm and 1500mm			
Pallet exit height	500mm (95mm with conveyors for palletjack access)			
	With manual forklift conveyors 2400mm			
Maximum pallet height	With standard		Stantard stand: 2000mm	
	conveyors	Custom stand: 2400mm

Y PALLETJACK CONVEYORS

Pallet conveyors designed to work with palletjack conveyors.

Distance from floor: 100 mm

Y INDUSTRIAL ROUTER

Allows for remote access to the palletizing cell via WiFi network.

CHARACTERISTICS

GENERAL CHARACTERISTICS	SAVVY PAL XL V2
Required clearance height*	Depending on the project
Box entry height	Between 700mm and 1500mm
Pallet exit height	500mm (95mm with conveyors for palletjack access)
Maximum pallet height	Between 1800mm and 2400mm depending on patterns
Minimum ambient temperature	5 ℃
Planimetry	± 25mm

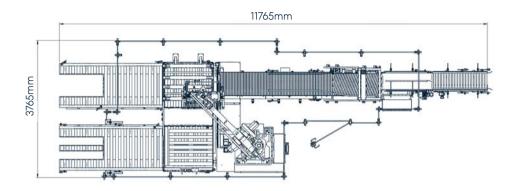

ELECTRICAL CHARACTERISTICS			
Electrical insta	ıllation (1)	400V/3Ph+N+GND 50Hz	
Installed power		15.75 KVA	
Air pressure		6 bar	
Air consumption	Without sheet dispenser	175 nl/min	
consumption	With sheet dispenser	212 nl/min	

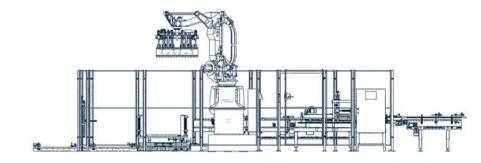

ROBOT		
Model		FANUC M - 410iC/185L
Maximum load	Without sheet dispenser	56 kg
	With sheet dispenser	52 kg
Controlled axes		4

SHEET DISPENSER	
Accepted sheets	Corrugated cardboard Anti-slip paper

PALLETS		
Supported types	Europal GMA CHEP	
Supported dimensions	1000 x 1200 / 800 x 1200
